kanishk . rewires

THE FULL SETUP FROM THE REEL

Automate your LinkedIn *lead gen* with Claude Code

Claude finds people who fit your ideal client, scores them, researches one real reason to reach out, drafts your note, logs every lead in your CRM and keeps your posting calendar full. You review, you press Send, you take the calls.

`7 steps` `about 45 min to set up` `about 20 min a day after that` `no code to write`

HOW IT FITS TOGETHER

Apollo
finds people who match your ideal client

Claude Code
scores, researches and drafts

LinkedIn (you)
you review and send every note

HubSpot
every lead and follow up, tracked

Publora
your posts, scheduled for the week

Claude talks to Apollo, HubSpot and Publora through their official MCP servers. The only thing it never does is message people on LinkedIn for you.

You send the messages

LinkedIn's User Agreement (section 8.2) bans bots and automated messaging. Claude drafts; you send. It also keeps your account safe.

200 characters per note

That is LinkedIn's limit for a connection note. Free accounts only get a few personalized notes a month, so spend them on your best fits.

Credits and permissions

Apollo searches can use credits on your plan. HubSpot actions follow your HubSpot permissions. Check both before you run big batches.

WHAT YOU NEED

- [ ] Claude Code, on a Claude plan that includes it or with API credits
- [ ] An Apollo account (a free plan is enough to start)
- [ ] A HubSpot account (the free CRM works)
- [ ] A Publora account with your LinkedIn profile connected
- [ ] A project folder for this, for example `linkedin-leads`
- [ ] 20 minutes a day to review and send

01 about 10 min, once

Connect your *tools*

Open a terminal in your project folder and add the three official servers. This gives Claude Code safe, scoped access to each tool through your own login.

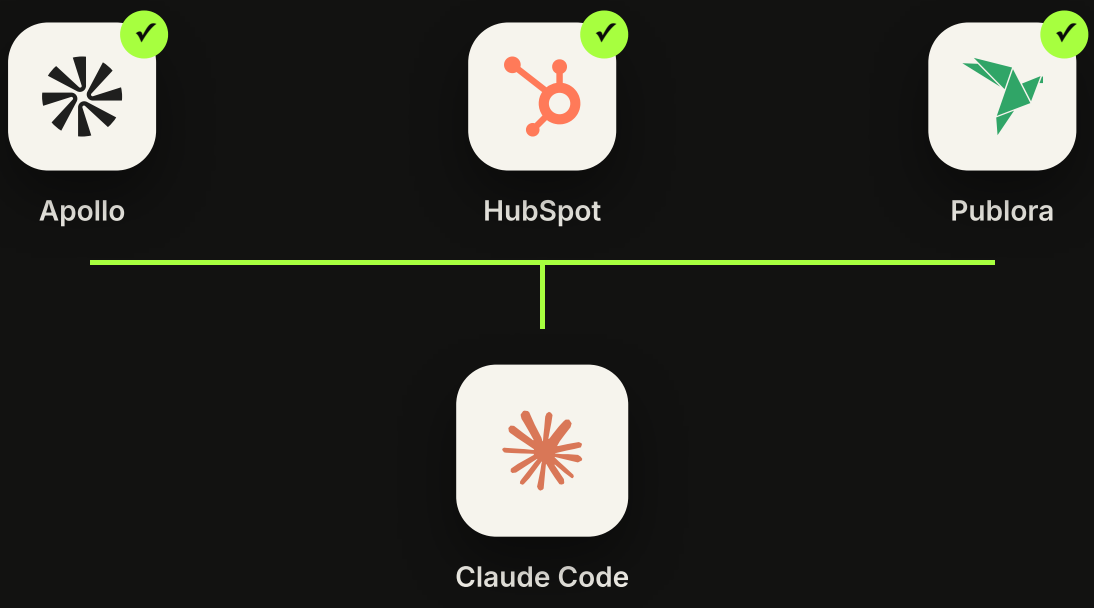

TERMINAL

```
claude mcp add --transport http apollo https://mcp.apollo.io/mcp
claude mcp add --transport http hubspot https://mcp.hubspot.com
claude mcp add --transport http --scope user publora https://mcp.publora.com/mcp
```

Now start Claude Code with `claude`, type `/mcp`, pick each server and choose **Authenticate**. Your browser opens; sign in and approve. A checkmark next to each one means you're connected.

TIP Connect Publora to your LinkedIn profile inside Publora first, so Claude can see it as a channel when you schedule posts in step 7.

WHAT YOU'LL SEE

```
> /mcp
✓ apollo · connected
✓ hubspot · connected
✓ publora · connected
```

02 about 10 min, once

Write your ideal client *once*

Save this as `ICP.md` in your project folder and fill in your own values. Every prompt that follows reads this file, so the more specific it is, the better your leads.

ICP.MD

```
# Ideal client
industry: consumer goods, D2C
role: Head of Growth, CMO, VP Marketing
company size: 11 to 200 employees
region: US, UK
signal: launching a product, hiring for growth or CRM, raised recently

# What I offer
one line: I help consumer brands turn first orders into repeat buyers.
proof: (one result you can share, with a number)
call to action: a 20 minute call
```

Why the signal line matters most: a signal is a reason this person needs you right now. It turns a cold note into a relevant one, and it carries the most weight when Claude scores leads in step 4.

YOUR FILE

ICP.md ✓ saved

```
1 # Ideal client
2 industry: consumer goods, D2C
3 role: Head of Growth, CMO
4 company size: 11 to 200
5 region: US, UK
6 signal: launching or hiring
```

03 about 2 min a run

Find your *leads*

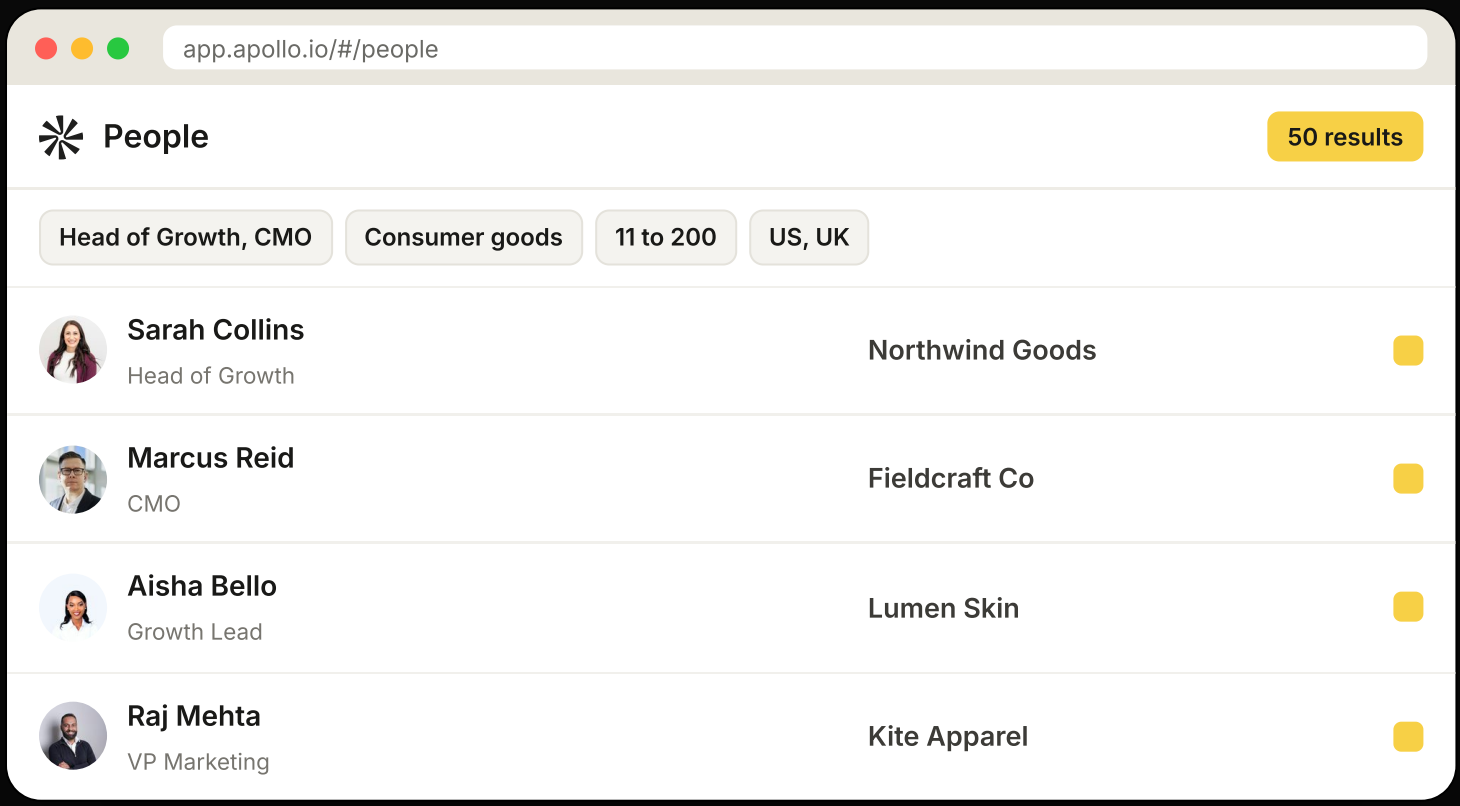

Paste this into Claude Code. It reads your ICP, searches Apollo with matching filters and saves a clean list you can open in any spreadsheet.

PROMPT

```
Read ICP.md. Using the Apollo tools, find 50 people who match it.
Save name, title, company, LinkedIn URL, location and one recent company signal to leads.csv.
Stop after 50 results, and tell me how many credits you used.
```

TIP Start with 25 to 50 leads. Smaller batches mean better research per person and fewer credits spent on poor fits.

APOLLO PEOPLE SEARCH

Illustrative data

04 about 3 min a run

Score and *research*

Claude scores every lead against your ICP and finds one real, recent reason to reach out, with the source, so you can check it before you use it.

PROMPT

```
Score every lead in leads.csv from 0 to 100 against ICP.md:
role 40, company size 20, region 10, signal 30.
For each lead, add one real reason to reach out and where you found it.
Sort by score and show me the top 10 as a table.
```

CHECK Open the source link for each reason before you use it. A wrong "congrats on the launch" costs more trust than a plain note.

YOUR TOP LEAD

Sarah Collins

Head of Growth · Northwind Goods

92

✓ Role match
✓ Size match
✓ Region match

REASON TO REACH OUT

Launching a new D2C range

Source: company news

Marcus Reid 86

Raj Mehta 81

Aisha Bello 74

Elena Rossi 68

Illustrative data

05 about 10 min a day

Draft the *outreach*

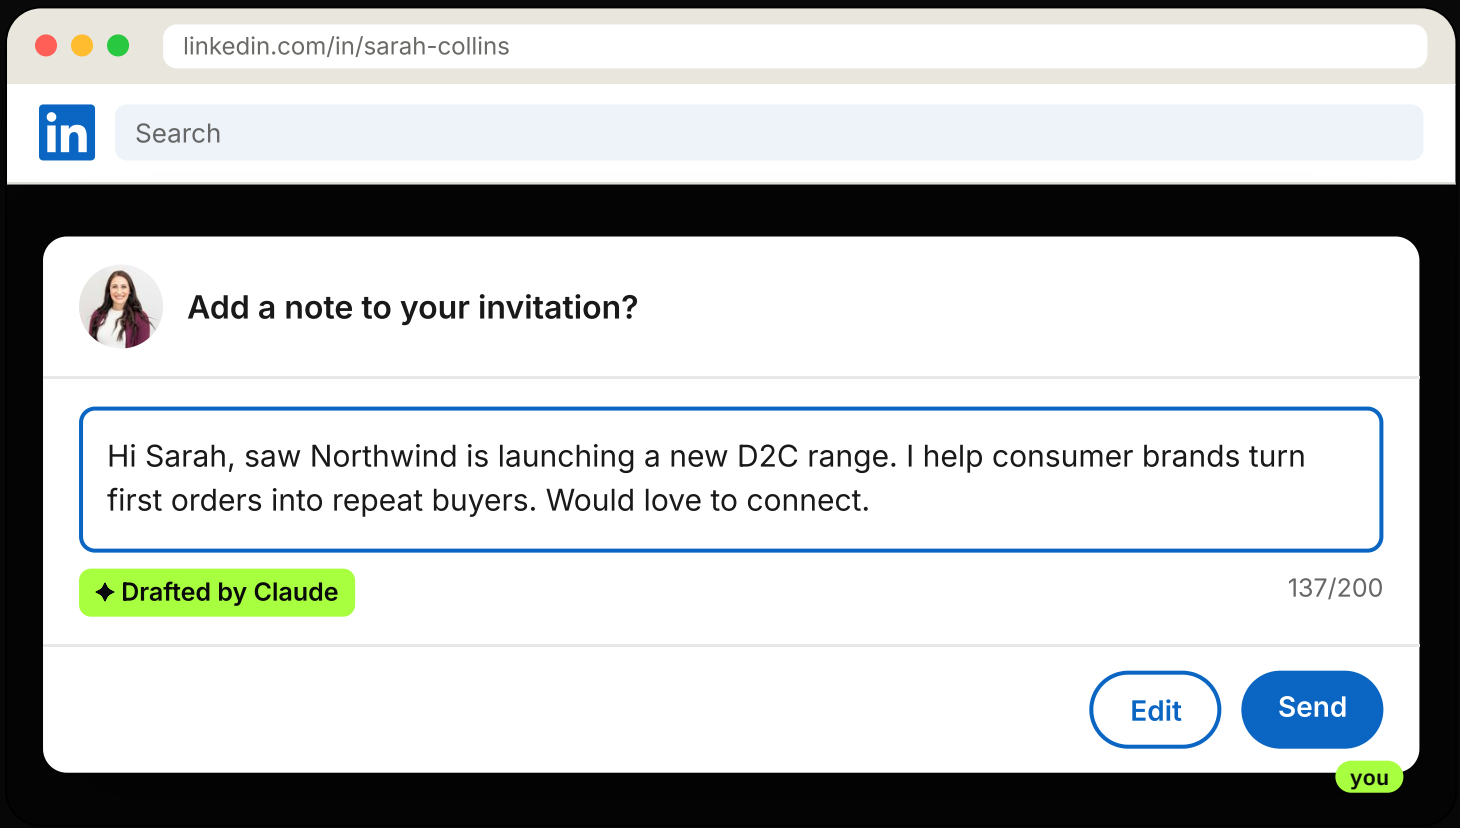

Claude writes a short note for each of your top leads. You open each profile, paste, adjust it so it sounds like you, and press Send yourself.

PROMPT

```
For the top 10 leads, draft a LinkedIn connection note for each.
Under 200 characters. Mention their signal, say what I do in one line, no pitch,
no links.
Write them to notes.md with the person's name and profile URL above each note.
Do not send anything. I will review and send them myself.
```

What a good note looks like: one detail about them, one line about you, and an easy reason to connect. No pitch and no link in the first message.

LINKEDIN INVITATION

06 about 2 min a run

Track in your *CRM*

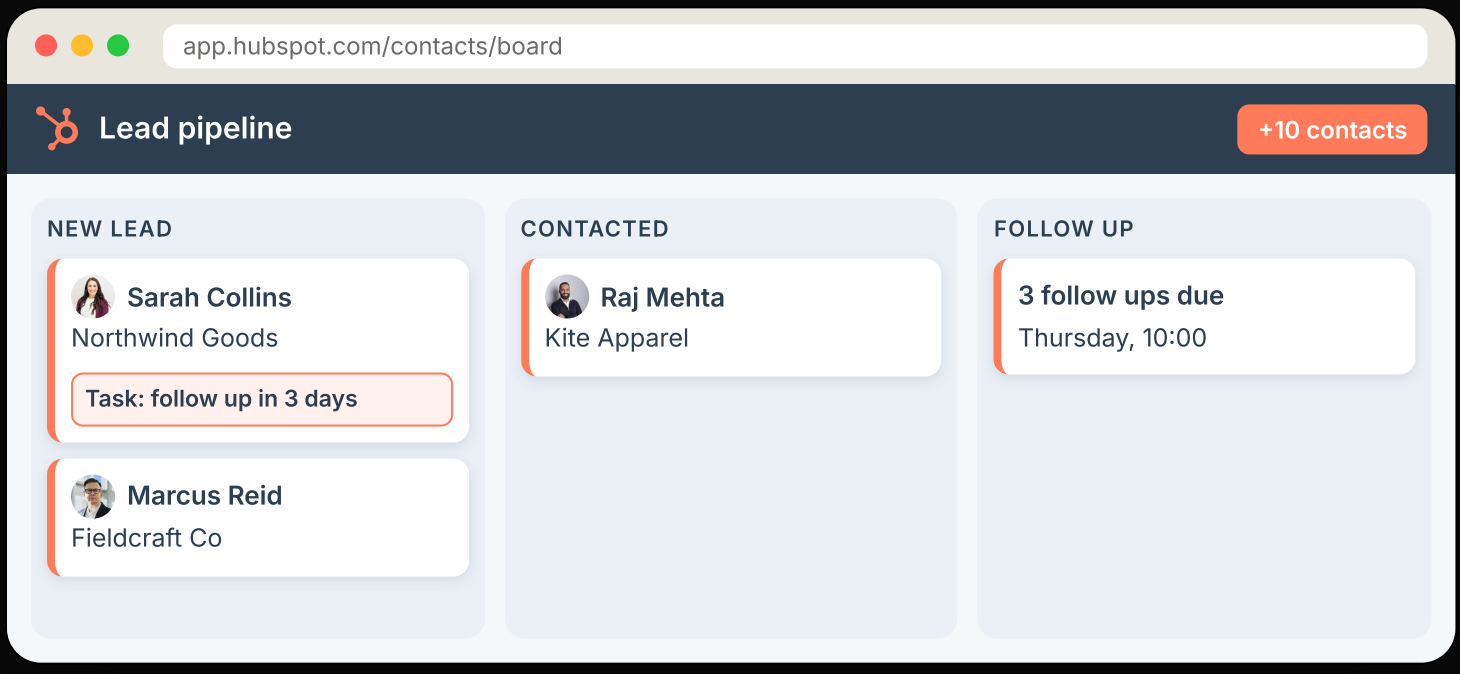

Every lead you contact lands in HubSpot with its score and reason as a note, plus a follow up task, so nobody slips through.

PROMPT

```
Using the HubSpot tools, create a contact for each of the top 10 leads.
Add their score and reason to reach out as a note on the contact.
Create a follow-up task for each one, due 3 business days from today.
```

TIP Run this right after you send your notes, so the follow up dates match the day you actually reached out.

HUBSPOT PIPELINE

Illustrative data

07 about 15 min a week

Post on *autopilot*

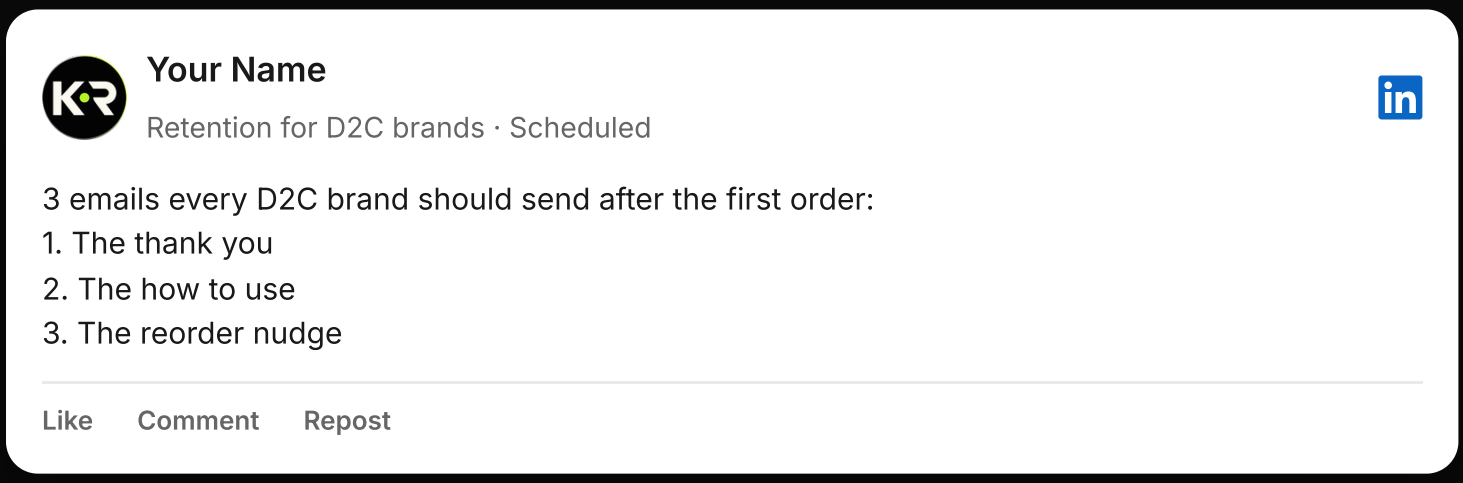

Keep a simple `wins.md` file with results, lessons and client stories. Once a week, Claude turns it into five posts in your voice, and after you approve them, Publora schedules them through LinkedIn's official API.

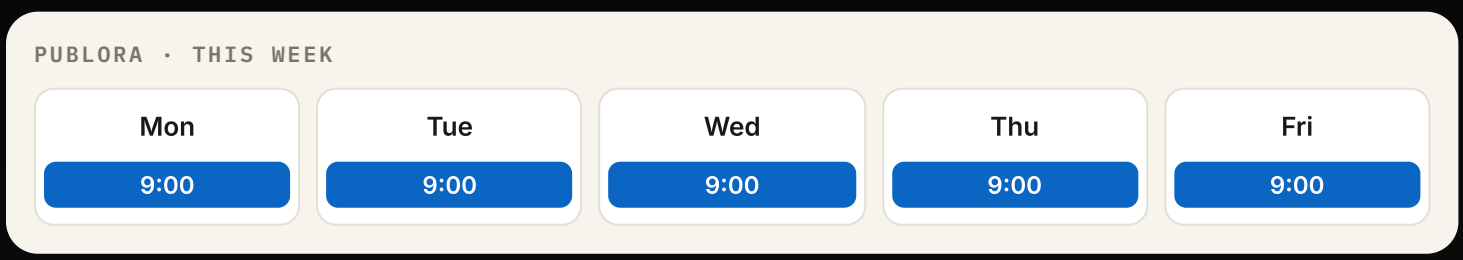

PROMPT

```
Read wins.md (my notes on results, lessons and client stories).
Write 5 LinkedIn posts in my voice: short lines, one idea each, a clear first
line, no hashtag lists.
Show me all 5 and wait for my changes.
After I approve, use the Publora tools to schedule them Monday to Friday at 9:00
AM my time.
```

Why this matters for lead gen: when someone accepts your note and visits your profile, a week of useful posts is what makes them reply.

YOUR WEEK

ONCE IT'S SET UP

Your *20 minute* day

Morning · 5 min

Run steps 3 to 5

Fresh leads, scored and researched, with notes waiting in notes.md.

Morning · 10 min

Send your best 10

Check each reason, tweak each note, press Send yourself. Then run step 6.

Afternoon · 5 min

Clear follow ups

Open HubSpot's tasks, reply to anyone who accepted, and book calls.

QUESTIONS

Before you *start*

Is this allowed by LinkedIn?

Yes, as set up here. Claude never touches your LinkedIn messages; you send every note yourself. Scheduling posts through Publora uses LinkedIn's official API. What LinkedIn prohibits is bots and tools that automate messaging, connection requests or scraping, and nothing in this setup does that.

Do I need Sales Navigator?

No. Apollo handles the search and filtering here. If you already use Sales Navigator, you can keep using it to view profiles before you send.

Can I use a different CRM?

Yes, if it has an MCP server Claude Code can connect to. This guide uses HubSpot because its official server can create contacts, notes and tasks.

Why not let Claude send the messages too?

Because it breaks LinkedIn's rules and puts your account at risk, and because the personal touch is the part that gets replies. Let Claude do the slow research and drafting; keep the human moment for yourself.

What does it cost?

It depends on your plans. Claude Code needs a Claude plan that includes it or API credits, Apollo searches may use credits, and HubSpot and Publora have free or paid tiers. Check each tool's pricing page before you scale up.
